

Overview

The PoS Analyzer captures a host of PoS protocols exchanged between the two nodes over SONET, and provides useful analysis, which includes distribution of protocols, protocol fields, frame lengths, and frame status. User can obtain detailed analysis of the protocol and can perform various statistics measurements.

PoS analyzer also supports **Packet Data Analysis** module (requires additional license) to perform detail analysis of MLPPP packets over IP and segregates them into SIP / H323 / MEGACO / MGCP / T.38 fax calls.

GL Communications supports the following types of PoS Analyzers:

- Real-time PoS Analyzer with Packet Data Analysis
- Offline PoS Analyzers

For more details, refer PoS Protocol Analyzer webpage.

Main Features

Display Features

- Displays Summary, Detail, Hex-dump, and Statistics Views
- Detail View:
 - Displays decodes of a user-selected frame from the summary view
 - Provides options to display or hide the required protocol layers
 - Contents of this view can also be copied to clipboard
- Summary View displays Dev #, Time Slot, Layer 3 Protocol, LCP message type and higher protocol specific information like Destination and Source IP address, Destination and Source TCP as well as UDP port details, HTTP/FTP message type, and so on in a tabular format
- Statistics View displays statistics based on frame count, byte count, frames/sec, bytes/sec etc for the entire capture data
- Any protocol field can be added to the summary view, filtering, and search features providing users more flexibility to monitor required protocol fields

818 West Diamond Avenue - Third Floor, Gaithersburg, MD 20878, U.S.A (Web) <u>www.gl.com</u> - (V) +1-301-670-4784 (F) +1-301-670-9187 - (E-Mail) <u>info@gl.com</u>

Main Features (*Contd*.)

Supported Protocols

• PoS, IPCP, BCP, BPDU, POP, CHAP, HTTP, SNMP, STUN, FTP, DNS, and DHCP

Filtering / Search

- Comprehensive hardware based filtering
- Supports software based search and filtering capabilitiesCapturing Streams

Capturing Streams

- Streams can be captured on the selected ports (1 and 2).
- Ability to capture and decode both PoS routed protocols, PoS bridged protocols

Export Options

- Exports Summary View information to a comma delimited file for subsequent import into a database or spreadsheet
- Capability to export detailed decode information to an ASCII file

Remote Monitoring

• Remote monitoring capability using GL's Network Surveillance System

Additional Features

- Ability to test and perform numerous measurements across WAN- LAN or LAN-LAN connection
- Ability to test and analyze PoS protocol in synchronous environment
- User can decode frames from the recorded trace files and can be played back using "Rx Packets to File" application

PDA Main Features

- Supported protocols:
 - SIP (Session Initiation Protocol RFC 2543 and RFC 3261), MEGACO, MGCP, H323/H225, T.38 Fax, and RTP
- Full RTP Analysis with audio capture/playback supported for all common codecs
- Provides the registration summary of each SIP registration including the user agent, registrar, status, registration request delay (RRD), etc. and graphical view of the active registrations and registration trace of each registration
- Provides Video QoS Statistics such as Missing Packets, Delay, Gap, Video Frame Count, Media Delivery Index (MDI- (Delay Factor : Media Loss Rate)), and Frame Rate, and more
- Supported Audio and Video codecs:
 - Mulaw, Alaw, G.726 (40/32/24/16 kbps), G.726 with VAD, GSM610, G729, G729B, AMR (Wide and Narrow band codec), ILBC (20, 30 msec), SPEEX, EVRC, EVRCB, H263+, and H264

Summary, Detail, and Hex dump Views

The Summary pane displays Dev#, Frame #, Time relative, Len, Error, Layer 3 protocol, LCP code, IPCP code, BCP code, PoS Message type, Source/Destination IP address, TCP Source/Destination Port, UDP Source/Destination Port, Message Type, and so on. The user can select a frame in Summary View to analyze and decode each frame in the Detail View. The Hex dump View displays the frame information in HEX and ASCII formats. The contents of Detail and Hex dump view can also be copied to clipboard.

Real-time and Offline Analysis

Multiple ports can be selected for a single instance of analyzer to capture the frames simultaneously. The recorded trace file can then be analyzed offline and exported to ASCII file, or printed. The real-time capturing requires users to specify ports and Frame Check Sequence (FCS).

Figure: Stream / Interface Selection

Filtering and Search

Users can record all or filtered traffic into a trace file. Filter and search capabilities adds a powerful dimension to the PoS analyzer. These features isolate required frames from the captured frames in real-time, as well as offline. In real-time capturing, filter based on length of frames can be set. The frames can be also be filtered after completion of capture based on Frame Number, Time, Length, Error, Layer3 Protocol, LCP Code, IPCP code, Seq no, PoS Message type, and so on.

Similarly, search capability helps user to search for a particular frame based on specific search criteria.

Statistics View

Statistics is an important feature available in PoS analyzer and can be obtained for all frames both in real-time as well as offline mode. Various statistics can be obtained to study the performance and trend in the PoS network and it is based on protocol fields and different parameters.

Packet Data Analysis (PDA) – Summary View

Main Features

- Call Quality Of Service (QOS) for all calls with E-Model based (G.107) Mean Opinion Score (MOS) and R-factor with individual and summary statistics presented in graphical and tabular formats
- Calculates minimum, maximum, and average Round Trip Delay (RTD) values for SIP calls
- Graphs are provided for key values to give a pictorial representation of the statistics; some of the graphs available are active calls, average jitter, E-Model MOS/R-Factor/Packets Discarded, RTP packets summary, ladder diagram for T.38 traffic, and call signaling
- Displays summary of signaling, audio, and video (for all video calls) parameters of each call in call summary
- Generates alert summary when particular vital parameters go beyond a specified value

PDA - Summary View

TA Summary view displays summary of data transmission in each direction including calling number, called number, duration, max/ min RTD, average RTD and so on. It includes separate statistical counts on total packets, calls, failed calls for SIP, H323, MEGACO, and RTP based calls. The user can get the statistics of active calls, purged calls, and so on.

Figure: Traffic Analyzer Summary View

Call Summary – Signaling, Audio, and Video Parameters

The Call Summary displays the signaling, audio, and video parameters of each call for SIP, RTP, MEGACO, and H323 in a tabular format. Video QoS parameters such as Codec Info, Frame Rate, Missing Packets, Delay, Gap, Video Frame Count, Out Of Sequence count, Duplicate Packets count, Media Delivery Index (MDI), etc. are displayed for all video calls with H.263 and H.264 codecs.

Figure: Signaling, Audio, and Video Parameters

Graphs in PDA – Summary View

Active Calls – A line graph, depicting the Number Of Calls Vs Time.

Average Jitter Distribution – Distribution of the Average Jitter values across the Total Sessions

Figure: Active Call Graph

Figure: Average Distribution Graph

Graphs in PDA – Summary View (Contd.)

E-model - This graph provides R-factor, MOS and packets discarded against number of sessions- all these three graphs show statistics of terminated calls.

- R-Factor A bar Graph that plots R-Factor across No of Sessions
- MOS A bar Graph that plots Mean Opinion Score values across No. of Sessions
- Packets Discarded A bar Graph that plots Packets Discarded across No. of Sessions
- RTP Packets Graph Plots and compares out of ordered packets, missing packets and duplicate packets against Total Audio Packets

Figure: E-Model Graph

T.38 Analysis - Supports decoding, and monitoring of Fax (T.38 data) over VoIP. Identified T.30 messages is displayed in T.38 ladder diagram.

Call Graph - Displays the message sequence of captured VoIP (SIP or MEGACO) calls.

Figure: T.38 analysis and Call Flow Ladder Diagram

Packet Data Analysis (PDA) - Detail View

Main Features

- Provides further detail statistics on the two (or one) RTP sessions that are part of a single call
- RTP sessions include the graphical representation of R-Factor statistics which includes Quality Metrics with R-Factor and MOS Factors graphs, Jitter Buffer Statistics, Degradation Factor, Burst Metrics, and Delay Metrics
- Codecs: Mulaw, Alaw, G.726 (40/32/24/16 kbps), G.726 with VAD, GSM610, G729, G729B, AMR (Wide & Narrow band), ILBC (20, 30 msec), SPEEX, EVRC, EVRCB, H263+, & H264

PDA – Detail View

This display assists in any comparisons that are to be made between the two RTP sessions of a call. Each frame of the selected session is dissected and its contents are displayed in a tabular form for easier viewing and comparisons. Vital aspects from the RTP frame needed for close analysis are included in the table.

Figure: Traffic Analyzer Detail View

Graphs in PDA – Detail View

Gap/Jitter graphs - Plots the Gap (in milliseconds)/Jitter versus the packet number

Gap Distribution Graph – Number of packets with a particular value of gap is plotted against the (gap) value

Jitter Distribution Graph – Number of packets with a particular value of jitter is plotted against the jitter value

Figure: Gap/Jitter Distribution Graph

Document Number: LTS205-LTS305-01

Graphs in PDA – Detail View (Contd.)

MOS Graph – Plots Mean Opinion Score values throughout the duration of the call.

Quality Factor – Plots and compares Good Quality packets, Packets Discarded, and Echo level against total Packets for each individual session.

Wave graph – Displays the amplitude of the incoming signal in a selected call as a function of time.

Spectral Display – Displays the power of incoming signal while the capturing is going on as a function of frequency.

Figure: Wave Graph and Quality Factors

Quality Metrics based on E-model includes R-Factor and MOS Factor. R-Factor bar graph will display statistics such as R Listening, R Conversational, R-G107, and R-Nominal values.

MOS Factor bar graph will display statistics such as MOS CQ, MOS PQ, and MOS Nominal values during a call.

Degradation Factor – A pie chart plots and compares different statistics such as Good Quality, Packets discarded, Echo level, Packet loss, and Regency against total Packets for each individual sessions.

Jitter Buffer Statistics – A pie chart plots and compares packets received, packets discarded and packets lost against total Packets for each individual sessions. Also provides a tabular data on average.

Other Features in PDA

Play Audio, Write to File, and Record Video

The Play Audio plays the selected call to the PC speaker. Write to File is similar to the Play Audio option. The basic difference being that the output is written to a file instead of playing to the speaker.

PDA can monitor video calls and display both audio and video RTP streams in summary view. Users can record video calls to a file in QuickTime format, which can be viewed by VLC player.

Record Video option is available for both auto detected RTP calls and SIP calls. Supported video codecs are: H263++ (CIF 190/350 kbps, 512 kbps, QCIF 64 /80/128 kbps) and H264 is an industry standard for video compression, the codec offers better compression performance over previous standards.

Save call

The Save Call feature enables the user to save a particular call either in GL's proprietary *.HDL file format or in Ethereal *.PCAP file format. Call Summary details could also be saved for a particular call and this will be saved as a *.rtf file. This is especially useful to get data from real-time traffic locations to the lab for detail analysis of a flawed call.

Save Call	×

✓ Overwrite Files Save Call(and the second

Figure: Save Call

Other Features in PDA (Contd.)

RTP/RTCP Statistics and Inband Events

The user can get the complete details of a single selected call such as Total Packets count, SSRC, RTP packet count, RTCP packet count, Total Audio bytes. Inband Events display inband DTMF and MF digits as they are received with details such as Timestamp, Type, Event, On-Time, Power, Freq1 / Power1, Freq2 / Power2.

Triggers and Action Settings

Triggers and Action Settings allow the user to filter calls based on certain SIP, RTP, MEGACO, and H323 parameters followed by a set of actions for the completed calls. The filtered file can be saved in either GL's proprietary HDL file format or Ethereal PCAP file format. Additionally, a summary of call signaling and audio parameters can be saved as *.rtf file. The actions include saving call to a file, recording audio to a file, sending an email, posting alert summary, viewing custom calls in summary view, creating Call Detail Records in CSV file format, and extracting Fax from calls in TIFF format.

Alert Summary

PDA generates alerts when particular vital parameters go beyond a specified value and display in Alert Summary table. The user can specify the criteria based on which the alerts are to be generated. The tab provides an active list of the alerts that have occurred during the test session in tabular columns.

Figure: Alert Summary View

Packet Data Analysis (PDA) – Registration Summary

- Provides the registration summary of each SIP registration including the user agent, registrar, status, registered time, expiry time, time to live, remaining time, and registration request delay (RRD), and Re-registration Attempts
- Provides graphical view of the active registrations and registration trace of each registration

Figure: Registration Summary

Enhanced Trace Saving Options

Users can control the captured trace files by saving the trace using different conventions such as trace files with user-defined prefixes, trace file with date-time prefixes, and slider control to indicate the total number of files, file size, frame count, or time limit. This feature also allows the captured frames to be saved into a trace file based on the filtering criteria set using display filter feature

	IPCP (IP Control Protocol)	RFC1332
	IPCP Extensions for Name Server Addresses	RFC 1877
	PPPMuxCP	RFC 3153
	ISDN H.225	H.225 Q.931 Layer
	SCTP	RFC 2960
	SUA (SCCP UA)	RFC 3868
	SNMP (V1, V2)	RFC 1157,1155,1902,3416,2863, 2578,3418,2011,2012 etc.
	SIP3261, MGCP, MEGACO, RTP, and RTCP	RFC 3261, RFC 3435, RFC 3015, RFC 2833, and RFC 3550
	H.263, H.245, and H.450	ITU-T H.263, ITU-T H.245, and ITU-T H.450.1 to

H.450.12

Supported Protocol Standards

Buyer's Guide

Item No	Product Description
<u>LTS205</u>	OC-3 / STM-1 PoS Protocol Analysis
LTS305	OC-12 / STM-4 PoS Protocol Analysis
ltem No	Related Software
<u>LTS200</u>	OC-3 / STM-1 ATM Monitor, BERT, Tx/Rx Test, RAW
<u>LTS300</u>	OC-12 / STM-4 ATM Monitor, BERT, Tx/Rx Test, RAW
<u>LTS201</u>	OC-3 / STM-1 PoS Monitor, BERT, Tx/Rx Test, RAW
<u>LTS301</u>	OC-12 / STM-4 PoS Monitor, BERT, Tx/Rx Test, RAW
<u>LTS202</u>	OC-3 / STM-1 ATM and RAW Record / Playback
<u>LTS203</u>	OC-3 / STM-1 PoS and RAW Record / Playback
LTS303	OC-12 / STM-4 PoS and RAW Record / Playback
<u>LTS204</u>	OC-3 / STM-1 ATM Protocol Analysis
<u>LTS304</u>	OC-12 / STM-4 ATM Protocol Analysis
<u>LTS206</u>	OC-3 / STM-1 UMTS Protocol Analysis
<u>LTS306</u>	OC-12 / STM-4 UMTS Protocol Analysis

GL Communications Inc.

Buyer's Guide (Contd.)

Item No	Related Hardware
<u>LTS100</u>	Lightspeed1000™ - Dual OC-3/12 STM-1/4 PCIe Card
<u>LTS105</u>	Lightspeed1000™ - Portable Dual OC-3/12 STM-1/4 USB Unit
LTS404	SFP, Single Mode
LTS405	SFP, Multimode
<u>SA019a</u>	1 Gbps / 10 Gbps Fiber Optic Cable, Single-Mode, Duplex LC to Duplex LC
<u>SA019b</u>	1 Gbps / 10 Gbps Fiber Optic Cable, Single-Mode, Duplex LC to Duplex SC
<u>SA019c</u>	1 Gbps / 10 Gbps Fiber Optic Cable, Multi-Mode, Duplex LC to Duplex LC
<u>SA019d</u>	1 Gbps / 10 Gbps Fiber Optic Cable, Multi-Mode, Duplex LC to Duplex SC
<u>SA019e</u>	40G / 100G Fiber Optic Cable, Multi-Mode
<u>SA019f</u>	40G / 100G Fiber Optic Cable, Single-Mode

For more details, refer <u>PoS Protocol Analyzer</u> webpage.
