

Double talk simulation for echo canceller testing

Script Description:

This script emulates the far end and near end call for echo canceller testing.

Procedure:

Connect the T1/E1 cards in 2 PCs by a loopback or crossover cable. Run server on PC1 and client software in PC2. Open GUI at PC2 and enable Vf out at timeslot 1 to listen to the data.

Variation 1: Using "DSPPOP" command

Script:

```
// Connection assumed: connect card1 and card2 from PC 'A' to card1 and card2 of PC 'B'
// respectively.
// this script should not be run simultaneously with GUI
//MODE: SEQUENTIAL
//
// User needs to comment the commands according to his requirement
